

SAVE THE DATE: OCTOBER 29th 1-4 PM

WORKSHOP

OUR CLIMATE RESILIENCY CENTER

IMAGINE

The temperature is well over 100 degrees. Forecast is for more of the same. Now the power has gone out all over town due to wildfires north of us. The air is smokey. There's no air conditioning in our homes.

Night-time temps are staying high. The power company isn't predicting when power will be restored. Weather forecast doesn't call for cooling for at least a couple more days.

Not much charge left in your cell phone. You've been keeping your insulin on ice in a small cooler but the ice is melting fast. You feel like you are holding up, except the smoke is making you cough a bit. You see your partner is awfully flushed. What do you do? The local gas station, like everywhere else, is closed. You don't want to use up what gas you have driving around trying to find cool shelter. Where would you go anyway?

TO CHURCH!

The Good Shepherd Environmental Justice Team wants your input on how a Climate Resiliency Center at our church will operate in a climate emergency such as this. We can do this together!

PLEASE JOIN US THURSDAY, OCTOBER 29th 1-4 PM
